

Arvados - Bug #11137

apt-get upgrade arvados-api-server on Ubuntu 12.04 did not update crunch-job

02/19/2017 12:06 PM - Joshua Randall

Status:	New	Start date:	02/19/2017
Priority:	Normal	Due date:	
Assigned To:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Arvados Future Sprints		
Description			
<p>My jobs were failing since I upgraded docker to 1.13.1 and installed v1.10+ versions of the docker images in keep.</p> <p>They were giving the error:</p> <pre>No Docker image hash found from locator e829be6274c110c4c16bf6381efae022+594 at /var/www/arvados-api/shared/vendor_bundle/ruby/2.1.0/gems/arvados-cli-0.1.20161017193526/bin/crunch-job line 413</pre> <p>Note the date/version of the arvados-cli gem was rather old. I ran `bundle update arvados-cli` in /var/www/arvados-api/current which installed the new crunch job and fixed the problem.</p> <p>My expectation would have been that the crunch-job script in the api server bundle would have been updated when I did the apt-get upgrade, but for some reason it was not.</p>

crunch-job is in the arvados-src package. Perhaps apiserver needs to list "exact same version of arvados-src package" as a dependency.

#2 - 08/28/2017 09:31 PM - Tom Morris

- Target version set to Arvados Future Sprints
