

Arvados - Bug #12349

[API] Validate container requests "output_path must be in a writable mount"

09/27/2017 04:15 PM - Tom Clegg

Status: New	Start date: 09/27/2017
Priority: Normal	Due date:
Assigned To:	% Done: 0%
Category: API	Estimated time: 0.00 hour
Target version:	
Description If output_path is not in a writable mount, crunch-run will cancel the container with a suitable error message (see #12298). But this means waiting (and perhaps paying) to bring up a compute node, only to check something that could be checked instantly by the API when committing the container request. Proposed fix: Check this when saving a container request (perhaps only when saving with state=Committed). If this error is detected, fail the create/update request.
