<b>Description</b>			
The install docs for keepproxy ( <a href="http://doc.arvados.org/install/install-keepproxy.html">http://doc.arvados.org/install/install-keepproxy.html</a> ) make no reference to the new-style configuration file <code>/etc/arvados/keepproxy/keepproxy.yml</code> but rather still give examples of passing tokens via environment variables in <code>runit</code> .
