[Controller] Port "collection update" functional tests from Rails API to controller test suite

08/08/2018 03:19 PM - Tom Clegg

Status: New	Start date:
Priority: Normal	Due date:
Assigned To:	% Done: 0%
Category: API	Estimated time: 0.00 hour
Target version:	
Description	
Port enough tests that we can then move the "update collection" functionality into the controller and be confident the resulting system still works.	
<ul style="list-style-type: none">• Rails functional tests• Rails integration tests• Some permission checks from the Rails unit tests ("only admin can do xyz")	
We don't need to port all of the unit tests -- most of that should wait until we know what the units look like in Go. Focus on proper API request handling more than the underlying collection model behavior.	
Since these APIs are (for now) implemented by proxying to Rails, the test can't rely on rolling back an entire-test transaction to avoid side effects. (It should be enough to call the "database reset" API in test teardown.)
