Based on the documentation at <https://doc.arvados.org/install/crunch2-slurm/install-dispatch.html>

We may have multiple dispatchers so I think we would need a section for them, identified by hostname. AuthToken was included inside an individual dispatcher section because the docs say that every dispatcher should have its own token.

```
NodeProfiles:
  apiserver:
    Dispatcher: slurm1
Timers:
  MinRetryPeriod: 30s
```
