Revision 7881bce4 - 05/08/2019 07:45 PM - Peter Amstutz

arvbox crunch-run and certificate fixes

arvbox crunch-run change to -container-enable-networking=default

Previously was "always" which causes CWL tests that checked that networking was disabled to fail.

arvbox root-cert creates file with .crt instead of .pem, because that's the file extension update-ca-certificates looks for.

Add cluster id and timestamp to arvbox test certificate common name to prevents collisions on the certificate subject.

Arvbox sets trusted api_client for workbench2.

No comments on the code, but running:

```
./test_with_arvbox.sh --no-reset-container --config dev --leave-running --suite conformance-v1.1
```

All the tests return the following:

```
The CWL reference runner no longer supports pre CWL v1.0 documents. Supported versions are:  
v1.0  
v1.1.0-dev1 (with --enable-dev flag only)
```

Also, would be nice to be able to pass the -j flag through test_with_arvbox.sh. Should work with both integration and conformance tests.

You need to run `test_with_arvbox.sh` with `--build` so that it builds a jobs image with the local checkout instead of fetching `arvados/jobs:latest`.

Also, would be nice to be able to pass the `-j` flag through `test_with_arvbox.sh`. Should work with both integration and conformance tests.

That ought to work. Did you try it?

#12 - 06/03/2019 07:10 PM - Eric Biagiotti

Gave up on running the tests with `test_with_arvbox`. Maybe we need some better documentation for running that script.

`./run_test.sh -j8 RUNNER=arvados-cwl-runner EXTRA="--api=containers --compute-checksum --disable-reuse --local"` resulted in the following:

```
Test 253 failed: /home/eric/projects/cwl_env/venv/bin/arvados-cwl-runner --api=containers --compute-checksum --disable-reuse --local --outdir=/tmp/tmpZhRx2l --quiet tests/optional-numerical-output-0.cwl tests/empty.json
Test that optional number output is returned as 0, not null
```

```
Compare failure expected: {
  "out": 0
}
got: {
  "out": null
}
caused by: failed comparison for key 'out': expected: 0
got: null
250 tests passed, 1 failures, 2 unsupported features
```

- Remove "this" in:

```
The one exception to the @hints@ section this is @arv:APIRequirement@
```

- Would be nice to link back to the API Requirement extension from the reference to it in the [cwl workflow tutorial](#)
- The Portability section in `cwl-style.html`:
 - The first sentence seems like it should go above the portability section
 - The subsequent sentences kind of come out of no where. Maybe a lead in sentence about why portability is important would help, or "Consider the following recommendations to improve portability of your workflows...".
 - The tip to Avoid declaring `InlineJavaScriptRequirement` is a performance problem and should probably be in the performance section.
- I think a separate page for Upgrading CWL might be helpful going forward. At the very least it shouldn't be a subsection under Portability.

#19 - 07/17/2019 02:12 PM - Peter Amstutz

- Target version changed from 2019-07-17 Sprint to 2019-07-31 Sprint

#20 - 07/17/2019 04:04 PM - Peter Amstutz

- Target version deleted (2019-07-31 Sprint)

Fixed. Actually I rewrote this whole thing to add more detail.

- Would be nice to link back to the API Requirement extension from the reference to it in the [cwl_workflow tutorial](#)

Added link.

- The Portability section in cwl-style.html:
 - The first sentence seems like it should go above the portability section
 - The subsequent sentences kind of come out of no where. Maybe a lead in sentence about why portability is important would help, or "Consider the following recommendations to improve portability of your workflows...".
 - The tip to Avoid declaring InlineJavascriptRequirement is a performance problem and should probably be in the performance section.

I rearranged this a bit and added lead-in sentences to set up each section.

- I think a separate page for Upgrading CWL might be helpful going forward. At the very least it shouldn't be a subsection under Portability.

I made a separate "Version and API support" page.
