

Arvados Workbench 2 - Feature #15054

Use pdh and uuid to navigate to collections

04/01/2019 01:50 PM - Moritz Gilsdorf

Status:	Closed	Start date:

Target version:	Backlog Q1, Q2		
Description			
In workbench2 it is not possible to navigate to a collection using the PDH, only UUID is possible.			
There are the following cases:			
<ol style="list-style-type: none">1. There is ONE collection with a given PDH2. There are MANY collections with a given PDH3. There are no collection with a given PDH			
The following behaviour is expected.			
<ol style="list-style-type: none">1. When accessing a collection like this <code>wb2.host.name/collection/c9805738ba048a0b108d438acd0c1eec+187</code> it should resolve to the UUID and open the collection2. In this case the Workbench2 should provide a list of collections that exist and are accessible for this PDH and allow the user to select one which will be opened3. The obvious will happen, nothing found.

- Status changed from Closed to Feedback
- Assigned To set to Chrystian Klingenberg

I think this was in the process of being worked on at the last review, but I can't tell from the ticket what the status is. Did this get closed because it was implemented or for some other reason?
