

Arvados - Bug #15183

[Workbench2] No errors reported when file is missing a block

05/01/2019 09:39 PM - Tom Morris

Status: New	Start date:
Priority: High	Due date:
Assigned To:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	
Description	
When looking at collection su921-4zz18-44qy35pg0lxshkf /cwl.input.yml the file is cwl.output.json is listed as containing 361 bytes, but when downloaded from Workbench, it produces a zero byte file, but without giving any error or warning.

History

#1 - 02/13/2020 04:09 PM - Ward Vandewege

- Subject changed from [Workbench] No errors reported when file is missing a block to [Workbench2] No errors reported when file is missing a block

I just tried this again:

- from Chromium: workbench itself does not throw an error, but the download **does** error out with "Failed - File Incomplete".
- from Firefox: workbench does not throw an error, but the download simply does not happen.

The behavior on workbench2 is identical. Changing this bug to be about workbench2, as workbench is close to EOL.

#2 - 07/06/2021 09:08 PM - Peter Amstutz

- Target version deleted (To Be Groomed)
