Updates at commit 84ef70b - branch 16052-update-packages

By using yarn audit I was able to understand better how the different modules are requested. There're indirect dependencies that require special treatment via a resolutions key on package.json file. See: <https://yarnpkg.com/lang/en/docs/selective-version-resolutions/>

This LGTM.

Would it make sense to add yarn audit to our build pipeline somewhere?

Maybe we can add it as part of the test pipeline. For example checking its errorlevel is ≥ 8 would fail when issues with priority high or worse are detected: <https://legacy.yarnpkg.com/lang/en/docs/cli/audit/#toc-yarn-audit>

#6 - 01/27/2020 07:51 PM - Anonymous

- Status changed from In Progress to Resolved
