#4 - 09/23/2020 03:31 PM - Peter Amstutz

- Target version deleted (2020-09-23 Sprint)

- Category deleted (SDKs)

Before I can even fix this, I need to tweak it to use the "download" keep-web endpoint, not "collections".

16827-fix-R-sdk @ [ca07e0d0c46f4e5b5a1c702a208391c0d1ad](https://ci.arvados.org/job/developer-run-tests/2115/)

- Fix the file listing bug, don't blindly remove the first element from the list (that was redundant anyway, it was already supposed to remove empty elements)
- Fix another serious bug appending a spurious '/' to the end of requests with query parameters (seems like controller is fussy about this in a way that the Rails API server isn't)
- Regenerate ArvadosR from Arvados 2.0 discovery doc, filter out obsolete APIs
- Fix tests.

There're many failing tests: <https://ci.arvados.org/job/developer-run-tests-services-api/2210/console> — Maybe because of [d371cc9](#) ?

I'll switch to a different review in the meantime.

This seems to be some kind of initialization error.

```
18:04:05 ActiveRecord::NoDatabaseError: FATAL: database "arvados_test" does not exist
```

Those "didn't match" errors happen when the database has not been properly (re)initialized.
