- Fix tests. Had to add in the ability to mock fetching the cluster config. This might be useful in other places.

#4 - 10/05/2020 01:14 PM - Lucas Di Pentima

Integration tests failed because of some missing import problem, but I think there's also some other problem on src/store/auth/auth-action-session.ts. It's very odd that the compiler haven't noticed this, have we disabled some type checking feature recently without noticing?

Yes, that's weird. I was running the unit tests but not the integration tests. It is still strange that it wasn't giving typescript compile failures. Fixed.

Note: as noted in standup, in my local test I was getting an unrelated test failure that seems to be due to a project table list refreshing (and changing sort order) while the context menu was open, resulting in a **different** item being selected. I don't know if it will happen again on Jenkins.

Just one observation:

- At src/views/search-results-panel/search-results-panel-view.tsx line 117 there's a debugging console.log() statement.

Other than that, it LGTM.
