Fixed issue, added tests

#13 - 06/24/2021 08:20 PM - Lucas Di Pentima

- File src/views/favorite-panel/favorite-panel.tsx - Lines 155-161: Commented out code
- File src/views/components/context-menu/action-sets/project-action-set.ts - Line 76: Debugging console.log() call
- The "Edit" Context menu doesn't work for projects on breadcrumbs and at the left-hand side tree panel.
- The same issue happens in the "Public Favorites" section. This may be a sign of unnecessary duplicated code, please check if that could be eliminated.
- The same issue also happens on "Shared with me" both at the left-hand side tree panel and the main panel.
- The added test could also mention collection editing on its name
- Also, the test is only checking for project/collection names but not descriptions.

Added more extensible tests

I was unable to reproduce the issue with context menu any special steps required?

- The 'can edit project in favorites' test...
 - ...is being called with `it.only()` (missed this at the previous review)
 - ...is also testing collection editing, so it should reflect that on its name.
- Regarding the problems mentioned in the previous review, let me explain them better:
 - Breadcrumbs: While being inside a project, you can right-click on the project name on the "Projects > ProjName" breadcrumbs at the top of the project's panel. The "Edit Project" option has the same issue reported on this ticket.
 - Public Favorites: When you click on the "Public Favorites" section at the left-hand side tree and then right-click on a project or collection inside the public favorites listing, you have the same issue.
 - Shared with me: The same as the previous bullet point, but for the "Shared with me" section on the left-hand side tree.
- The "Public Favorites" and "Shared with me" issues seem to make visible a code duplication issue that would be really good to eliminate instead of just duplicate the fix on them (if possible).

#16 - 06/30/2021 07:39 PM - Lucas Di Pentima

Also forgot to mention that if you right-click on a project at the left-hand side tree, and click on "Edit Project", it also has issues.

Fixed issues in other places

#18 - 07/02/2021 10:03 PM - Lucas Di Pentima

Reviewing <arvados-workbench2|78e3c7b>

- The "Shared with me" case still is pending fixing.
- Please write tests for all the failure cases.
- In `collection.spec.js` there's a test called with `it.only()` (coming from a previous branch), please fix that too.

More tests added

#20 - 07/06/2021 01:43 PM - Lucas Di Pentima

A couple of small comments:

- I think it would be nice to rename the `editProjectOrCollection` command to something more explicit like `testEditProjectOrCollection` as the command does a double-check to ensure the changes were applied, what do you think?
- Some tests failed because of the lack of "guards" on the tests when removing objects of the UI. For example, on `favorites.spec.js` you do a couple of "Remove from favorites" actions, I think you need to wait for those favorites to disappear before doing anything else because if you immediately right-click on another object, the DOM can change from the previous action in between and make your test fail.
