

Arvados - Bug #17257

acrContainerImage not being honored consistently

01/12/2021 10:24 PM - Peter Amstutz

Status:	Resolved	Start date:	01/14/2021
Priority:	Normal	Due date:	
Assigned To:	Peter Amstutz	% Done:	100%
Category:	Workbench2	Estimated time:	0.00 hour
Target version:	2021-01-20 Sprint		
Description			
When using Workbench 2 to create a container request from pirca-7fd4e-c2bb0z0szqdacyc the acrContainerImage field is honored.			
When creating a container request from pirca-7fd4e-zkvu363nlkykwu6 it does not honor acrContainerImage, it creates the CR with arvados/jobs.			
The only substantive difference I can find is that the 1st one takes a string input, the 2nd one takes a File input which has a default value.			
It is particularly odd because the "Runner" field in the "Advanced" section of the form has the correct value. Somehow it is being replaced with the default "arvados/jobs" value before the container request is constructed.

Going to the "Workflows" panel and then clicking "Run" on a workflow followed a slightly different code path than going to "+NEW" and "Run a process". This needed to call getWorkflowRunnerSettings() to initialize the "advanced" fields correctly.

Just one nit:

- I think we could un-export the constant at src/store/run-process-panel/run-process-panel-actions.ts Line 189 now that it isn't used anywhere else.

Otherwise LGTM, thanks!
