Description			
<p>These are the hooks that run on every PR, and block merging until they pass. Since Travis started limiting their free tier, this has become a major blocker to merging PRs. We can use GitHub actions instead.</p> <p>https://github.com/common-workflow-language/cwltool</p> <p>https://github.com/common-workflow-language/schema_salad</p> <p>The general idea for these tests is to use `tox` as much as possible, so any changes in that direction are welcome.</p> <p>Someone has started this at https://github.com/common-workflow-language/cwltool/pull/1411, make sure not to duplicate effort.</p> <p>Relevant links:</p> <ul style="list-style-type: none">• https://docs.travis-ci.com/user/languages/java/ (and https://travis-ci.com/github/common-workflow-language/cwlviewer/builds/206265984)• https://docs.github.com/en/actions/guides/building-and-testing-java-with-maven• https://docs.github.com/en/actions/quickstart• https://docs.github.com/en/actions/learn-github-actions/migrating-from-travis-ci-to-github-actions

<https://github.com/common-workflow-language/cwltool>

https://github.com/common-workflow-language/schema_salad

This two are done, here are the remaining repos:

<https://github.com/common-workflow-lab/cwljava>
<https://github.com/common-workflow-language/cwlviewer>
<https://github.com/common-workflow-language/cwl-upgrader>
<https://github.com/common-workflow-language/cwl-website>
