

Arvados - Bug #17745

[config] arvados-server config-dump with ec2 driver has confusing output

06/01/2021 06:09 PM - Ward Vandewege

Target version:			

Description

On Arvados 2.1.2:

```
# arvados-server config-dump
```

```
...
```

```
Containers:
```

```
CloudVMs:
```

```
  BootProbeCommand: sudo docker ps -q
```

```
  DeployRunnerBinary: /proc/self/exe
```

```
  Driver: ec2
```

```
  DriverParameters:
```

```
    AccessKeyID: ""
```

```
    AdminUsername: admin
```

```
    BlobContainer: ""
```

```
    ClientID: ""
```

```
    ClientSecret: ""
```

```
    CloudEnvironment: AzurePublicCloud
```

```
    DeleteDanglingResourcesAfter: 20s
```

```
    EBSVolumeType: gp2
```

```
    ImageResourceGroup: ""
```

```
    Location: centralus
```

```
    Network: ""
```

```
    NetworkResourceGroup: ""
```

```
    Region: us-east-1
```

```
    ResourceGroup: ""
```

```
    SecretAccessKey: ""
```

```
    SecurityGroupIDs:
```

```
      - sg-YYYYYYYYYYYYYYYYYYYY
```

```
    SharedImageGalleryImageVersion: ""
```

```
    SharedImageGalleryName: ""
```

```
    StorageAccount: ""
```

```
    Subnet: ""
```

```
    SubnetID: subnet-XXXXXXXXXXXXXXXXXXXX
```

```
    SubscriptionID: ""
```

```
    TenantID: ""
```

```
...
```

This output shows that the ec2 driver is selected. But; a number of the DriverParameters listed are from the **azure** driver, which is confusing. E.g. 'CloudEnvironment: AzurePublicCloud', 'SharedImageGalleryImageVersion', 'SharedImageGalleryName', etc.
