

Arvados - Bug #17750

[deployment][arvados-formula] centos 7 needs to install using rvm for api and workbench

06/02/2021 06:42 PM - Javier Bértoli

Status:	Resolved	Start date:	07/21/2021
Priority:	Normal	Due date:	
Assigned To:	Javier Bértoli	% Done:	100%
Category:	Deployment	Estimated time:	0.00 hour
Target version:	2021-08-04 sprint		
Description			
arvados-api-server and arvados-workbench are RoR apps, and the version provided in Centos7 is too old. The formula installs RVM in centos7 and set the installed ruby as the default, but some gems are not being installed correctly. Ensure the dependencies are in place when installing the packages.

Just one thing:

- in kitchen.yml, debian9 is still listed, but that is not a supported distro

Otherwise, LGTM thanks.
