#### History

##### #1 - 08/06/2021 06:43 PM - Peter Amstutz

- Release set to 41

##### #2 - 08/10/2021 07:51 PM - Peter Amstutz

- Status changed from New to In Progress

##### #3 - 08/10/2021 07:52 PM - Peter Amstutz

17984-cwl-project-uuid-users @ [74aa79ebb951a915a8f5aba49852a0119835c579](https://github.com/74aa79ebb951a915a8f5aba49852a0119835c579)

Validation recognizes user uuids.

Also add check that groups are projects.

Also improves error reporting to avoid a back trace in this case when not run with --debug.

##### #4 - 08/11/2021 01:48 PM - Lucas Di Pentima

Some comments:

- The `api().users().get(uuid=xxxx).execute()` call I believe is meant to check if the current user has access to the tpzed-type UUID. Wouldn't it be more correct to just compare if the UUID is the same as the current user's UUID or is there a case where a user would submit a workflow on another user's home project?
- Some tests are failing at: <https://ci.arvados.org/job/developer-run-tests-remainder/2731/console>

##### #5 - 08/12/2021 07:48 PM - Peter Amstutz

Technically an admin could assign the workflow run to be owned by another user. It might not really make sense but at the same time I don't see a benefit to forbidding it.
