Description			
arvados-api-server and arvados-workbench are RoR apps, and the version provided in Ubuntu 18.4 is too old.			
The formula should install RVM and set the installed ruby as the default in Ubuntu 18.04.			
Ensure the dependencies are in place when installing the packages.

Just one comment; there are gpg calls to the ubuntu key servers in there. GPG key servers are quite flakey. Why not just store those 2 keys in the repo and load them from files? We do that almost everywhere else.

Otherwise, LGTM.
