

Arvados - Bug #4182

[Workbench] [API] "Manage" permission should be sufficient to delete subprojects

10/10/2014 07:40 PM - Bryan Cosca

Status:	New	Start date:	10/10/2014
Priority:	High	Due date:	
Assigned To:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Arvados Future Sprints		
Description			
In projects/qr1hi-j7d0g-834hs5rnunpn6y6 I cannot delete the "New Project" subproject using the trash bin next to show or the dropdown selection... menu. Also, I was given manage access from peter to the main project. I expected to be able to manage subprojects within this project because having manage access to the entire project including subprojects seems plausible.
