

Arvados - Feature #4343

[SDKs] arv create needs --project-uuid and --name parameters for appropriate classes

10/29/2014 03:49 PM - Bryan Cosca

Status:	New	Start date:	10/29/2014
Priority:	Normal	Due date:	
Assigned To:		% Done:	0%
Category:	SDKs	Estimated time:	0.00 hour
Target version:	Arvados Future Sprints		
Description			
this way, we wouldn't have to go through home, find the template and put it into the project.			
We can run <code>arv create pipeline_template --name woof --project-uuid qr1hi-j7d0g-ilj35tcsm6unfc3</code> and then we would be able to go straight into that project and run it.			

History

#1 - 10/29/2014 06:57 PM - Ward Vandewege

- Subject changed from *arv create pipeline_template needs parameters (--project-uuid and --name)* to *[SDK] arv create pipeline_template needs parameters (--project-uuid and --name)*

#2 - 10/30/2014 12:54 PM - Brett Smith

- Subject changed from *[SDK] arv create pipeline_template needs parameters (--project-uuid and --name)* to *[SDKs] arv create needs --project-uuid and --name parameters for appropriate classes*

- Category set to *SDKs*

- Target version set to *Arvados Future Sprints*

I'm going to put this in Future sprints because there's a workaround: when you're writing the object JSON, you can set the "owner_uuid" field to the project UUID, and the "name" field to the desired name.
