

## Arvados - Story #5865

### [Crunch] Run a local job using a docker image directly from the shell VM (without writing the docker image to Keep)

04/30/2015 05:09 PM - Tom Clegg

<b>Status:</b>	New	<b>Start date:</b>	04/13/2015
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assigned To:</b>		<b>% Done:</b>	0%
<b>Category:</b>	Crunch	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	Arvados Future Sprints		
<b>Description</b>			
The objective is to make this development cycle much quicker:			
<ul style="list-style-type: none"><li>• Edit Dockerfile.</li><li>• Rebuild docker image.</li><li>• Run job using new docker image.</li></ul>			
Related feature (could be included here if it turns out to be easy, otherwise should move to its own issue):			
<ul style="list-style-type: none"><li>• Start a shell whose environment is identical to that of a running task. In other words, run a job with a single task, using <code>script="bash"</code>.</li></ul>
