Revision e73222a8 - 05/27/2015 06:23 PM - Peter Amstutz

Merge branch '6090-docker-use-local-sso' closes #6138

History

#1 - 05/22/2015 02:54 PM - Peter Amstutz

- Tracker changed from Bug to Story

#2 - 05/22/2015 02:55 PM - Peter Amstutz

- Project changed from Arvados Private to Arvados

#3 - 05/22/2015 02:55 PM - Peter Amstutz

- Assigned To set to Peter Amstutz

#4 - 05/22/2015 03:18 PM - Nico César

reviewing 6090-docker-use-local-sso commit ae3bb0033a24a38489c49ffc26e5a5e8fd93c160

docker/arvdock

- line 13: hardcoded ARVADOS_DOMAIN=dev.arvados should a parameter
- line 224: why commenting out #start_vm=true ?

docker/config.yml.example

- just a curiosity.. is this used as template somewhere in curoverse? or is just for the (external) user to have an example?

docker/workbench/apache2_vhost.in

- line 26: why is qr1hi hardcoded there? even is a comment couldn't be @ARVADOS_DOMAIN@

#5 - 05/22/2015 03:35 PM - Nico César

So I cant really test this in my machine... I have space restrictions and SSD drive is incredible slow. Options here?

#6 - 05/22/2015 07:34 PM - Peter Amstutz

docker/arvdock

- line 13: hardcoded ARVADOS_DOMAIN=dev.arvados should a parameter

Fixed

- line 224: why commenting out #start_vm=true ?

Right now it doesn't really work, so it seems better to disable it entirely.

docker/config.yml.example

- just a curiosity.. is this used as template somewhere in curoverse? or is just for the (external) user to have an example?

It's used by docker/build_tools/build.sh

docker/workbench/apache2_vhost.in

- line 26: why is qr1hi hardcoded there? even is a comment couldn't be @ARVADOS_DOMAIN@

Removed those comments since they are useless.

#7 - 05/27/2015 06:19 PM - Nico César

checked a7d558d6c2db242a6555c7f397cb4d91618aa13c

looks good to me
