

Arvados - Bug #6234

[Workbench] Admins should be able to edit their own user records, and view other users' home projects" from title

06/03/2015 07:19 PM - Ward Vandewege

Status:	Resolved	Start date:	06/10/2015
Priority:	Normal	Due date:	
Assigned To:	Radhika Chippada	% Done:	100%
Category:	Workbench	Estimated time:	0.00 hour
Target version:	2015-07-08 sprint		
Description			
Admins need to be able to see their own user page to manage their group memberships, etc.			
Right now, going to the usual URL for that renders your home project. This was first filed as #3756 . We fixed this by making the user page inaccessible, and hiding the Show button for it from the users listing.			
It's now clear we need a better solution. In #3756 , Tom suggested implementing a "better way to ensure {"move this project to..." → Home → OK} redirects to projects#show with uuid=current_user.uuid instead of users#show." He noted that "solution is a waste of trouble if we decide to switch to the "special undeletable project" implementation for "Home",," but we still haven't done that, so it seems like it's time to implement the longer solution and undo the Show button hiding hack.			
After this change (subject to permission, of course):			
<ul style="list-style-type: none">• {workbench}/projects/{user_uuid} will show the home project of the given user• {workbench}/groups/{user_uuid} will redirect to /projects/{user_uuid} if necessary/convenient (this might not be necessary any more, but it doesn't seem to break anything either, so it's fine to leave it alone).• {workbench}/users/{user_uuid} will show the "edit/manage user" page for the given user

Revision 665b0fbe - 06/26/2015 02:36 PM - Radhika Chippada

closes #6234

Merge branch '6234-user-edit-self'

History

#1 - 06/05/2015 07:21 PM - Brett Smith

- Description updated

- Category set to Workbench

- Target version changed from Bug Triage to 2015-07-08 sprint

#2 - 06/05/2015 08:39 PM - Brett Smith

- Subject changed from [Workbench] User can not edit oneself to [Workbench] User can not edit oneself/Cannot view other users' home project

#3 - 06/05/2015 09:08 PM - Tom Clegg

This bug will be trivial to fix if we resolve the "owner_uuid can be a user or a project" design oddity: i.e., change from "home project == user" to "each user has exactly one home/default project". See [#6274](#)

#4 - 06/08/2015 06:56 PM - Brett Smith

- Subject changed from [Workbench] User can not edit oneself/Cannot view other users' home project to [Workbench] User cannot edit oneself/view other user's home project

#5 - 06/09/2015 04:26 PM - Tom Clegg

- Story points set to 0.5

#6 - 06/10/2015 08:10 PM - Radhika Chippada

- Assigned To set to Radhika Chippada

#7 - 06/17/2015 01:25 PM - Radhika Chippada

- Status changed from New to In Progress

#8 - 06/17/2015 06:14 PM - Tom Clegg

- Subject changed from [Workbench] Admins should be able to edit their own user records to [Workbench] Admins should be able to edit their own user records, and view other users' home projects" from title

Reverted previous title update.

#12 - 06/18/2015 02:15 AM - Radhika Chippada

About updates in branch **6234-user-edit-self**:

- Admin user can now see the "Show" button in /users page and access it
- Also, updated to allow admin user to see other users' home pages
 - Added Home project link in each row of /users page
 - I added the Home project link for root as well as anonymous users. If we hate it very much, I can add logic to suppress these for specific users.
- I didn't do anything about second from last bullet point in description "{workbench}/groups/{user_uuid} will redirect to /projects/{user_uuid} if necessary/convenient (this might not be necessary any more, but it doesn't seem to break anything either, so it's fine to leave it alone)." I noticed that /groups/{user_uuid} does not currently work in production. And, since it does not seem necessary, I did not want to invest the time to address this as part of this exercise.

#13 - 06/25/2015 05:58 PM - Peter Amstutz

Per our discussion, it is extremely confusing when you are viewing the home project of (or any project owned by) another user but the "Home" link in the breadcrumbs bar links to your own home project. This is a preexisting bug, but with the ability to visit other user's home projects it is now even more confusing.

This should be addressed, ideally by having the "Home" link in the breadcrumbs change to point to the topmost owner of the project currently being viewed. There are two other links on the page to your own home project so this does not hurt navigation in any way.

#14 - 06/25/2015 06:28 PM - Peter Amstutz

Proposed behavior for breadcrumb rendering:

- When looking at your home project or a subproject of your home project, show "Home" at the root of the breadcrumbs
- When looking at another user's home project, put the name (or username or email address) at the root of the breadcrumbs
- When looking at a subproject owned by another user, but we can't read all the way to that user's home project, put the name (or username or email address) at the root of the breadcrumbs with a rendering style to indicate clicking is disabled.
- When looking at the home project for a group, put the name at the root of the breadcrumbs
- When looking at a subproject owned by a group, but we can't read all the way to the group home project, put the name at the root of the breadcrumbs with a rendering style to indicate clicking is disabled.

#15 - 06/25/2015 07:29 PM - Tom Clegg

Moving further discussion of breadcrumbs to [#3573](#).

This should be addressed, ideally by having the "Home" link in the breadcrumbs change to point to the topmost owner of the project currently being viewed. There are two other links on the page to your own home project so this does not hurt navigation in any way.

As evidenced by the discussion since, fixing this bug is a story in its own right, and it's not high enough priority to disrupt the current sprint for. Let's deal with [#3573](#) separately, and leave it out of scope for this story. Thanks.
