

Arvados - Bug #6274

[API] [Workbench] Home project should be a real object (group with group_class="project"), not current_user.

06/09/2015 04:04 PM - Tom Clegg

Status: New	Start date:

Target version:	
Description Implementation <ul style="list-style-type: none">• Add default_project_uuid attribute to users table. Must not be null. Must resolve to a group with group_class="project".• Create a new default project for each new user.• Each user must be the owner_uuid of its own default_project_uuid, in order for "[read-only] group admin" feature to keep working.• Default owner_uuid for new objects is the current user's default_project_uuid, not the current user's uuid.<ul style="list-style-type: none">◦ services/api/app/models/arvados_model.rb - general case restricts owner_uuid to a group uuid, not a user uuid◦ services/api/app/models/group.rb - exception to permit a user uuid as owner_uuid should be here◦ transparently change owner_uuid from current_user.uuid to current_user.default_project_uuid during model validation, in order to support old clients (but will any clients have problems when the owner_uuid is different from what they requested?). This should log a warning on the server side so we can monitor whether active clients have stopped relying on it.◦ migrate db by adding a default project for each user (system_user's default project should be system_group)◦ migrate user-owned objects to their respective default_project_uuids◦ various clients will need updating
