[Workbench] Use download service instead of passing Keep data through Rails

06/11/2015 05:52 PM - Tom Clegg

Status: Resolved	Start date: 06/10/2015
Priority: Normal	Due date:
Assigned To:	% Done: 0%
Category: Workbench	Estimated time: 0.00 hour
Target version:	
Description	
May require additional work on the download server to support whatever authentication mechanism is needed.	
<ul style="list-style-type: none">One possibility is to decode a Workbench cookie with configured rails-secret-token (suitable if nginx is mapping a namespace under workbench onto the downloader, or using a cookie domain¹ to tell the browser to send the cookie to the downloader host as well)	
Workbench needs a config knob for "base uri for downloads" (use built-in if not configured) if not relying on nginx mapping a namespace	
Workbench needs to set a more permissive cookie domain or (if not relying on nginx mapping) use JS tricks for download links	
¹ Or a route that copies Authorization to an encrypted cookie?
