

Arvados - Task #7339

Bug # 7001 (New): [SDKs] Recursive pipeline instance arv-copy doesn't copy job objects, losing metadata

Update the "Using arv-copy" user guide to include pipeline instances as one of the object types that can be copied over.

Description			
In commit 369024474a98585003bedb5053bcc947b4eec551 , the doc is updated and it no longer says that pipeline instances can also be copied over. When #7001 is resolved, it would be nice to add that back.			
No need to update the examples used in the documentation from template to instance.
