

Arvados - Bug #7823

ubuntu package libarvados-perl should depend on libcrypt-ssleay-perl

11/18/2015 06:34 PM - Joshua Randall

Status:	New	Start date:	11/18/2015
Priority:	Normal	Due date:	
Assigned To:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Arvados Future Sprints		
Description			
libarvados-perl installed from the ubuntu package (0.1.20150730193703.6dff070) does not function without libcrypt-ssleay-perl, which it does not depend on:			
1. perl -MArvados -e " Can't locate Net/SSL.pm in @INC (@INC contains: /etc/perl /usr/local/lib/perl/5.14.2 /usr/local/share/perl/5.14.2 /usr/lib/perl5 /usr/share/perl5 /usr/lib/perl/5.14 /usr/share/perl/5.14 /usr/local/lib/site_perl .) at /usr/share/perl5/Arvados.pm line 62. BEGIN failed--compilation aborted at /usr/share/perl5/Arvados.pm line 62. Compilation failed in require. BEGIN failed--compilation aborted.			
After installing libcrypt-ssleay-perl, this works:			
1. apt-get install libcrypt-ssleay-perl 2. perl -MArvados -e "			

History

Actually it seems that the Net::SSL on Ubuntu 12.04 is broken (it caused an error with crunch-job trying to do REST api discovery getting an "500 read failed" error which I tracked down to the SSL library - the server was actually getting the request and responding fine, but the SSL library wasn't able to interpret it for some reason).

I've uninstalled the apt package and instead installed (site-wide) using cpan: `cpan install Net::SSL` and this is now fixed.
