

Arvados - Bug #9513

[Keep] keepproxy should not set content-length to -1 when responding 411 Length Required

06/29/2016 03:47 PM - Tom Clegg

Status:	Resolved	Start date:	06/29/2016
Priority:	Normal	Due date:	
Assigned To:	Tom Clegg	% Done:	100%
Category:	Keep	Estimated time:	0.00 hour
Target version:	2016-07-06 sprint		
Description			
The code that checks the Content-Length request header for PUT requests, inexplicably, copies the request header into the response headers if there was an error parsing it as an int. It's unclear whether the intent was truly to copy the header when parsing <i>failed</i> , or whether err!=nil was a typo and the intent was to copy the header when parsing <i>succeeded</i> , but neither makes any sense: invalid headers are invalid, and there's no reason to expect the PUT response body to be the same size as the request body.
