Arvados - Story #9745

[Crunch2] crunch-dispatch-slurm can get API host and token from config.json

08/05/2016 01:31 PM - Brett Smith

Status:	Resolved		**Start date:**	08/08/2016
Priority:	Normal		**Due date:**	
Assigned To:	Tom Clegg		**% Done:**	100%
Category:	Crunch		**Estimated time:**	0.00 hour
Target version:	2016-08-17 sprint			

Description

In order to run, crunch-dispatch-slurm requires the usual ARVADOS_API_HOST and ARVADOS_API_TOKEN environment variables set. Additional configuration goes in /etc/arvados/crunch-dispatach-slurm/config.json. This means that the typical install requires writing two files: a configuration file for the init system to set the environment variables, and then config.json for other options.

Teach crunch-dispatch-slurm to read the API hostname and token from config.json [configuration names TBD]. Update the Install Guide to point users to doing all configuration there. This will simplify crunch-dispatch-slurm administration.

Does this need install guide updates?

#5 - 08/10/2016 03:22 PM - Brett Smith

The branch for #9705 is already written as if this branch was merged. So the answer to your question is yes, but the updates are already written. Now we just need #9706 to be done too.

Sounds good. I am merging the branch into master so that you can call [#9705](#) done. Thanks.
